

Tubing Bailer

Available in 2 7/8" and 3 1/2"

The Titus Tubing Bailer is a suction tool designed to clean out well debris such as sand from the well bore. The tools are connected to the tubing string. The tool is then landed on the top of the well debris or sand with a special saw-tooth spade flapper valve and the tool is stroked and all debris is caught and captured in the tubing through the flapper valve. The more the debris you have, the more the tubing is stroked and the more the tubing will fill until desired open hole has been reached. The Titus Tubing Bailer is then pulled from the well and the tubing is emptied into a holding tank for disposal.
